Who pays more:

a worker?

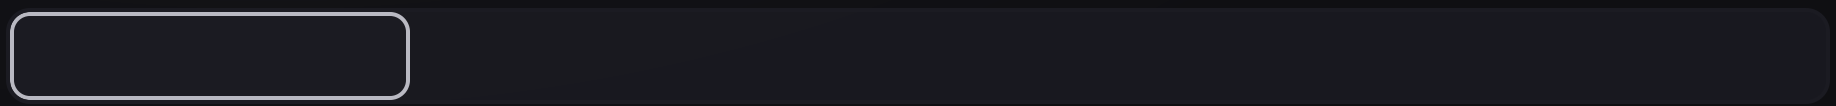
technology leaders?

One question. 2025 data. One answer.

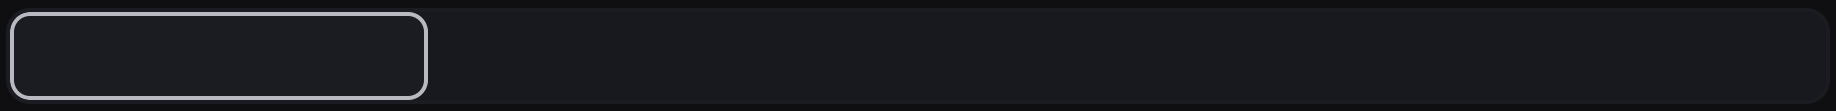
Tax paid, as a share of what you have.

A WORKER ~25%

TURKCELL €5.4bn revenue · deferred entries 5.5%



TÜRK TELEKOM €5.4bn revenue · deferral is an accounting effect 5.8%



VODAFONE TR no bar to draw

— publishes no Turkish tax figure at all

Companies do everything to avoid helping the country.

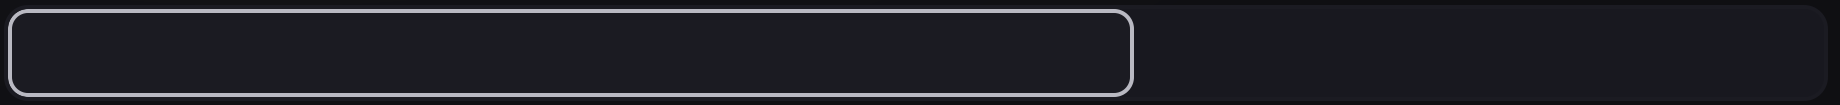
THE PHONE TEST

3 / 5

The worker pays tech every month.

A WORKER · PHONE BILL 800 TL/mo ≈ 10,000 TL/yr → 2.1% of income **2.1%**

TÜRK TELEKOM · R&D R&D spend / revenue **1.3%**



> **Same math.** The worker's bill is 2.1% of their income — R&D is 1.3% of a €5.4bn giant's revenue.

The worker invests more in tech than the technology leaders do.

The system rewards the wrong side.

WORK

- We all **want to contribute** to the country — and we do
- Taxed before the money arrives
- Nothing to defer, nothing to deduct

ASSET OWNERS · THE RICH

- Defer entries, **deduct everything**
- Leverage, depreciation — profit engineered down
- Money holders decide what the state sees

It punishes work — and rewards asset owners. Tax assets, not income.

THE NUMBERS, CHECKED

5 / 5

Full report in the comments.

Three-page PDF — **every number sourced**, every gap flagged. Method and caveats included; only 2025 data.
